◆ REVEALD®

Epiphany Intelligence Platform™
Find, prioritize, and master risk—with eye-opening speed and insight.

CYBER RISK HUNTING WITH EPIPHANY

FOR CARRIERS & THEIR INSURED

Cybersecurity is a growing concern for insurers, especially as clients rely more on remote workers. Home networks are far more vulnerable to attack than office environments. And cyber-attacks are increasing exponentially (along with cyber insurance payouts). The need for better risk management has never been more urgent.

But there's good news.
"Risk Hunting" is a new cybersecurity concept that bridges gaps in existing security technologies. And Epiphany™ is a Risk Hunting platform that's proven effective for government and corporate clients.

Epiphany looks at technical cybersecurity issues in context with real-world business impacts. Then it quickly prioritizes risks—by business value—for fast, effective mitigation. Epiphany tells security teams what to fix first, before an attack occurs. And it communicates risk clearly for everyone, from IT analysts to the executive suite.

BETTER PROTECTION FOR INSURED—AND CARRIERS

- Greater risk visibility—internal and external
- Risks prioritized by quantified business value
- Automated processes—set it and forget it
- Faster mitigation of critical problems
- More effective use of existing security tools
- Improved cyber hygiene
- Better enforcement of security policies
- Better monitoring of regulatory compliance
- Improved risk posture and maturity

ADDED VALUE FOR INSURED

- Stronger insurance policy; less risk burden
- No impact on existing systems
- Works with existing security tools
- Scalable to support unlimited growth
- Real-time awareness of security posture
- Greater understanding of assets/operations
- Justification of capital investments in security

ADDED VALUE FOR CARRIERS

- More informed decisions on underwriting policies
- More competitive policy offerings
- More accurate view of client risk posture/maturity
- Common risk metrics across entire client portfolio
- Advanced insights into emerging risk trends
- Uniform deployment across all client
